

SQL Server Create Datatabase

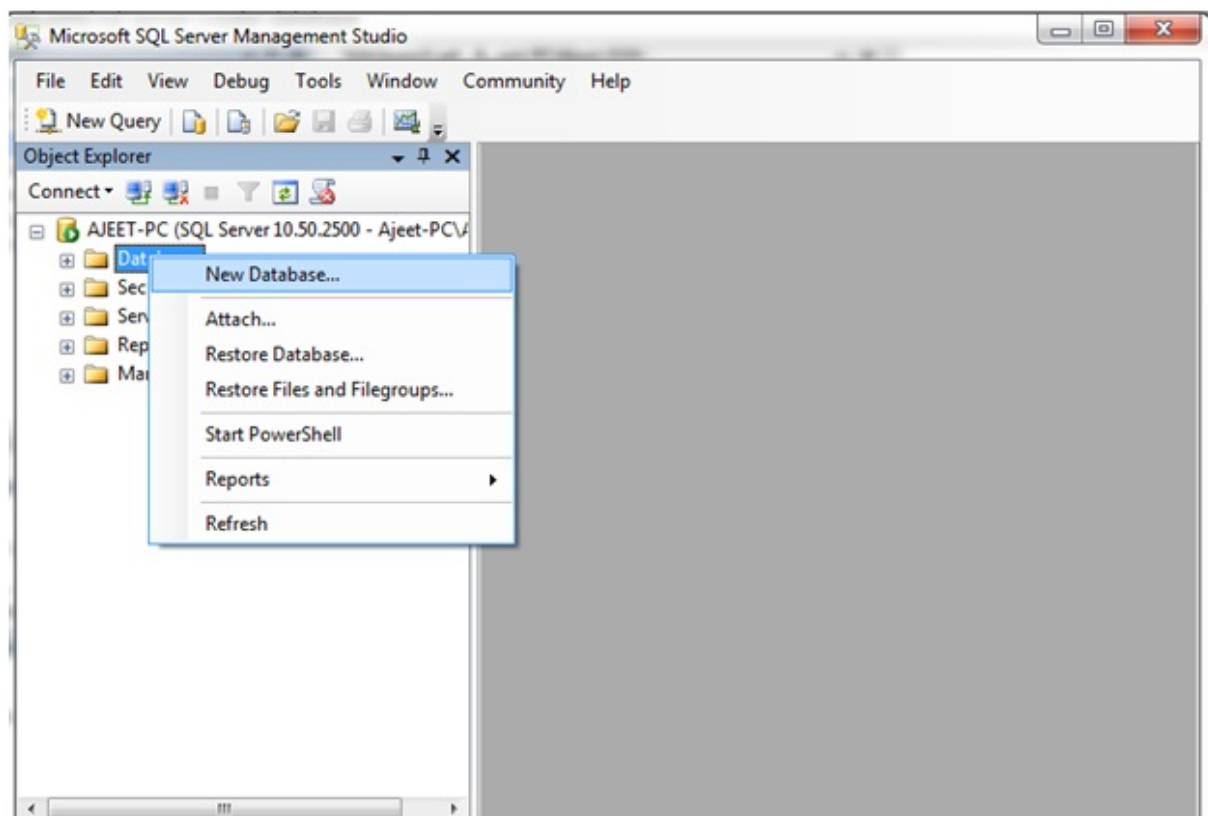

javatpoint.com/sql-server-create-database

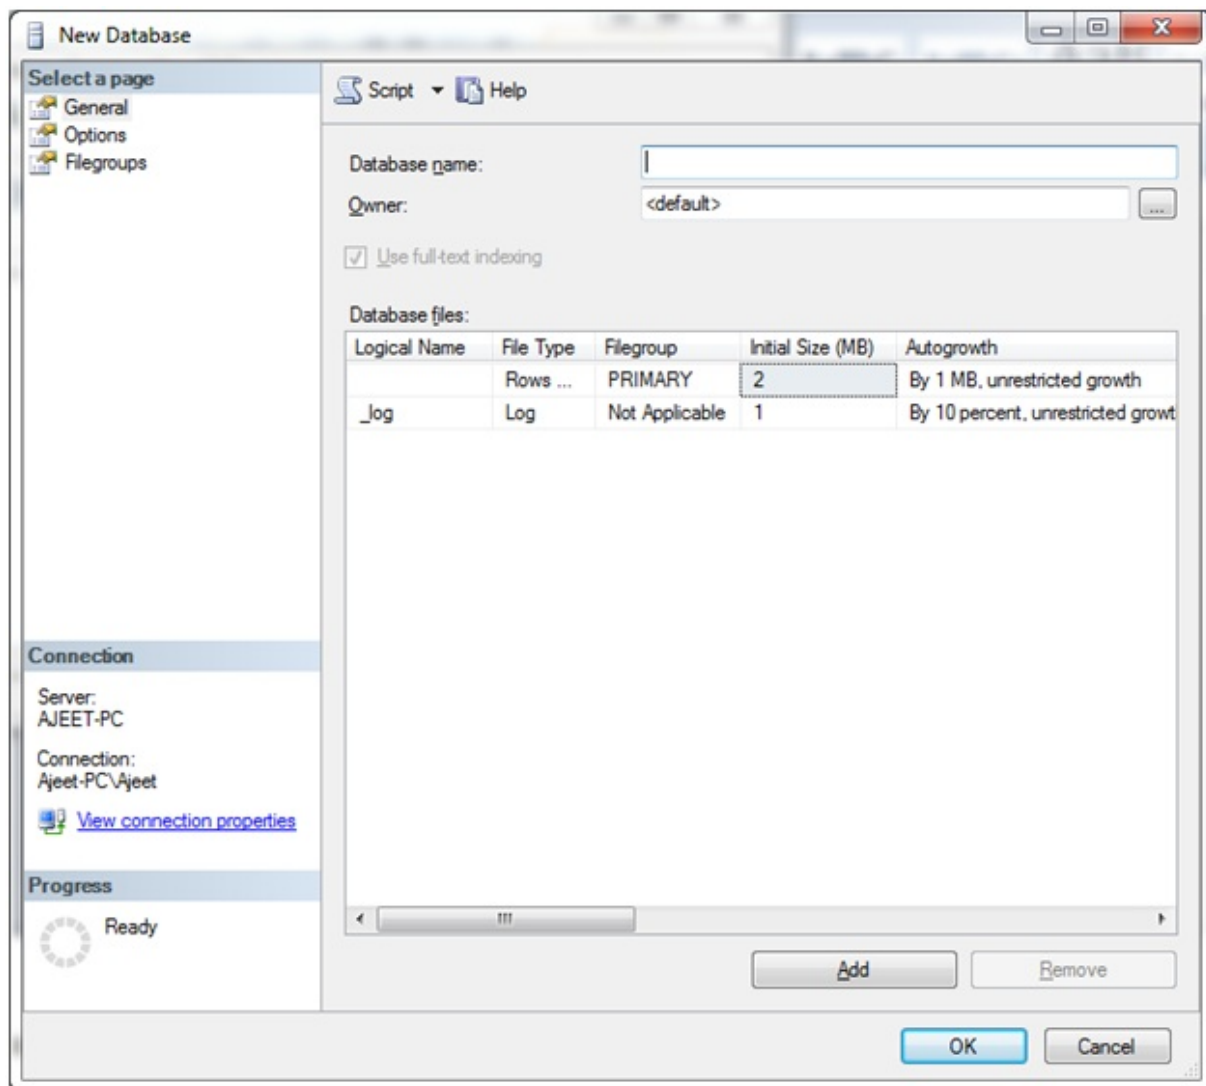

In SQL Server, you have to create a database first before creating a table.

Go to SQL Server Management Studio. You will see a Database.

Right click on the databases and you will see new database. Create a new database.

Name your database.

For example:

Create a database "javatpoint".

New Database

Select a page

Script

Help

Database name:

javatpoint

Owner:

<default>

...

☒ Use full-text indexing

Database files:

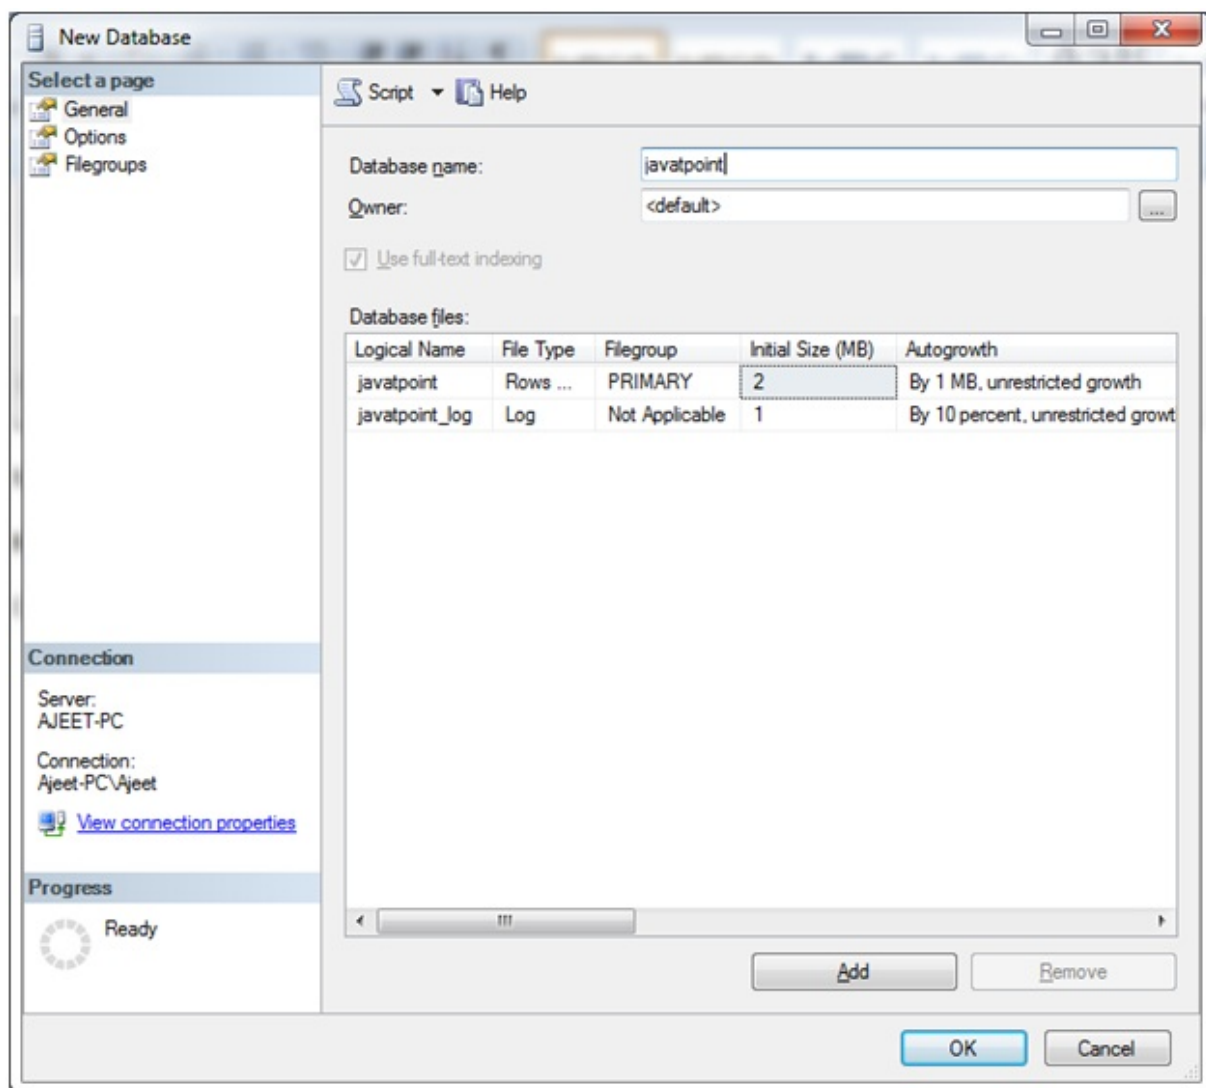

Logical Name	File Type	Filegroup	Initial Size (MB)	Autogrowth
javatpoint	Rows ...	PRIMARY	2	By 1 MB, unrestricted growth
javatpoint_log	Log	Not Applicable	1	By 10 percent, unrestricted growth

Add

Remove

OK

Cancel

You can see that a database is created as "javatpoint".
