

# SQL Server Update Data

 [javatpoint.com/sql-server-update-data](http://javatpoint.com/sql-server-update-data)

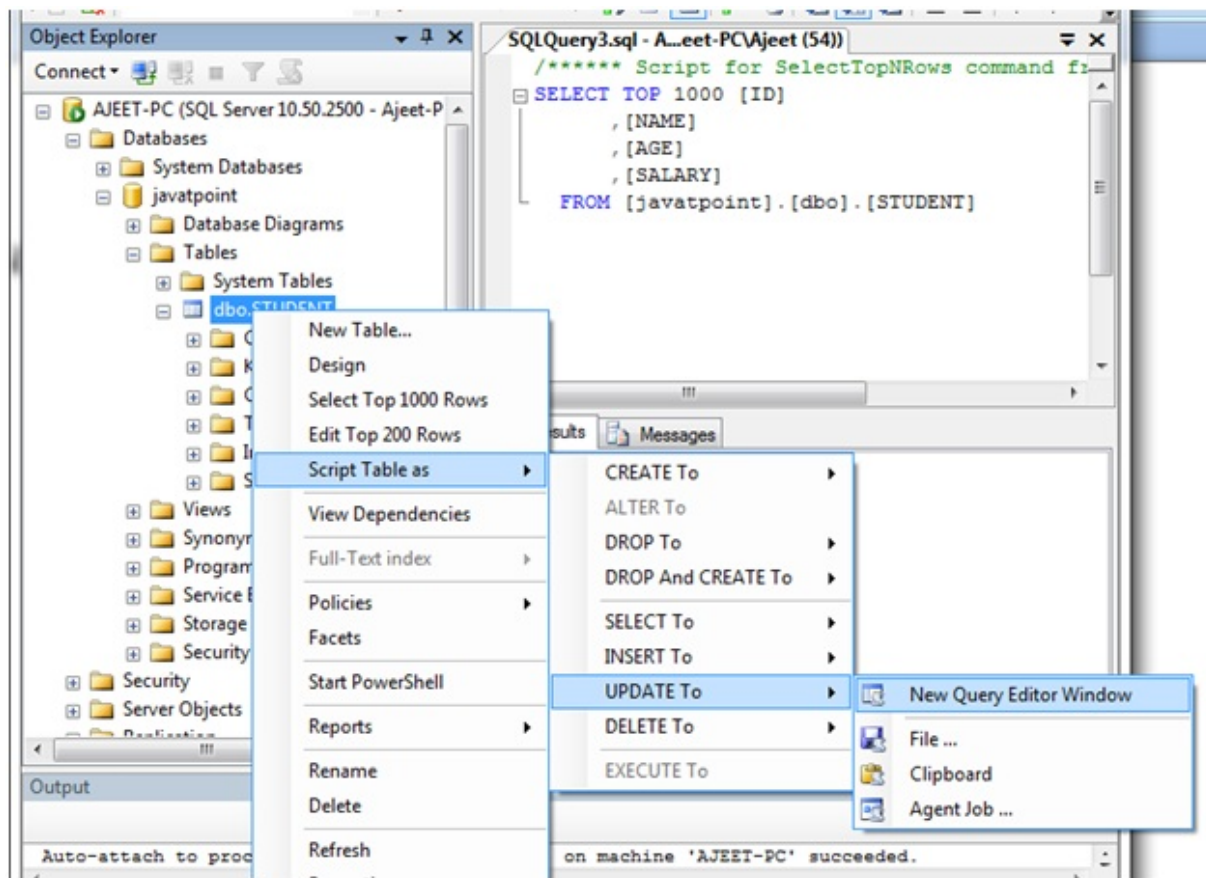

In SQL Server database, UPDATE statement is used to update or modify the already inserted records into a table.

## Syntax:

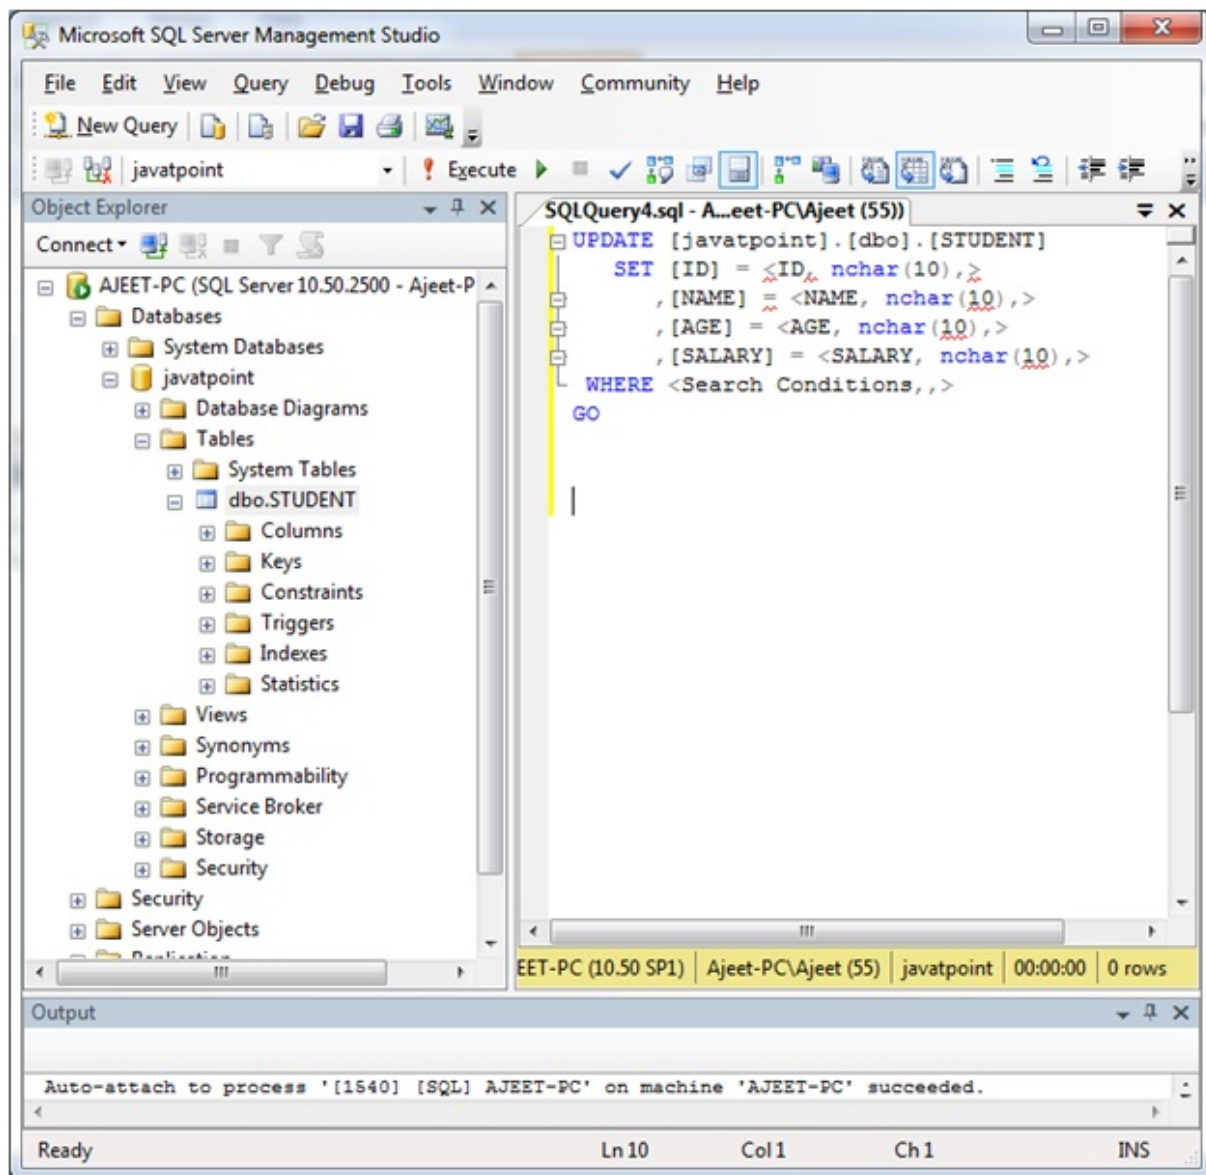

1. UPDATE [javatpoint].[dbo].[STUDENT]
2. SET [ID] = <ID, nchar(10),>
3. ,[NAME] = <NAME, nchar(10),>
4. ,[AGE] = <AGE, nchar(10),>
5. ,[SALARY] = <SALARY, nchar(10),>
6. WHERE <Search Conditions,,>
7. GO

## Use the SQL Server management Studio:

Follow the management studio screenshots given below:

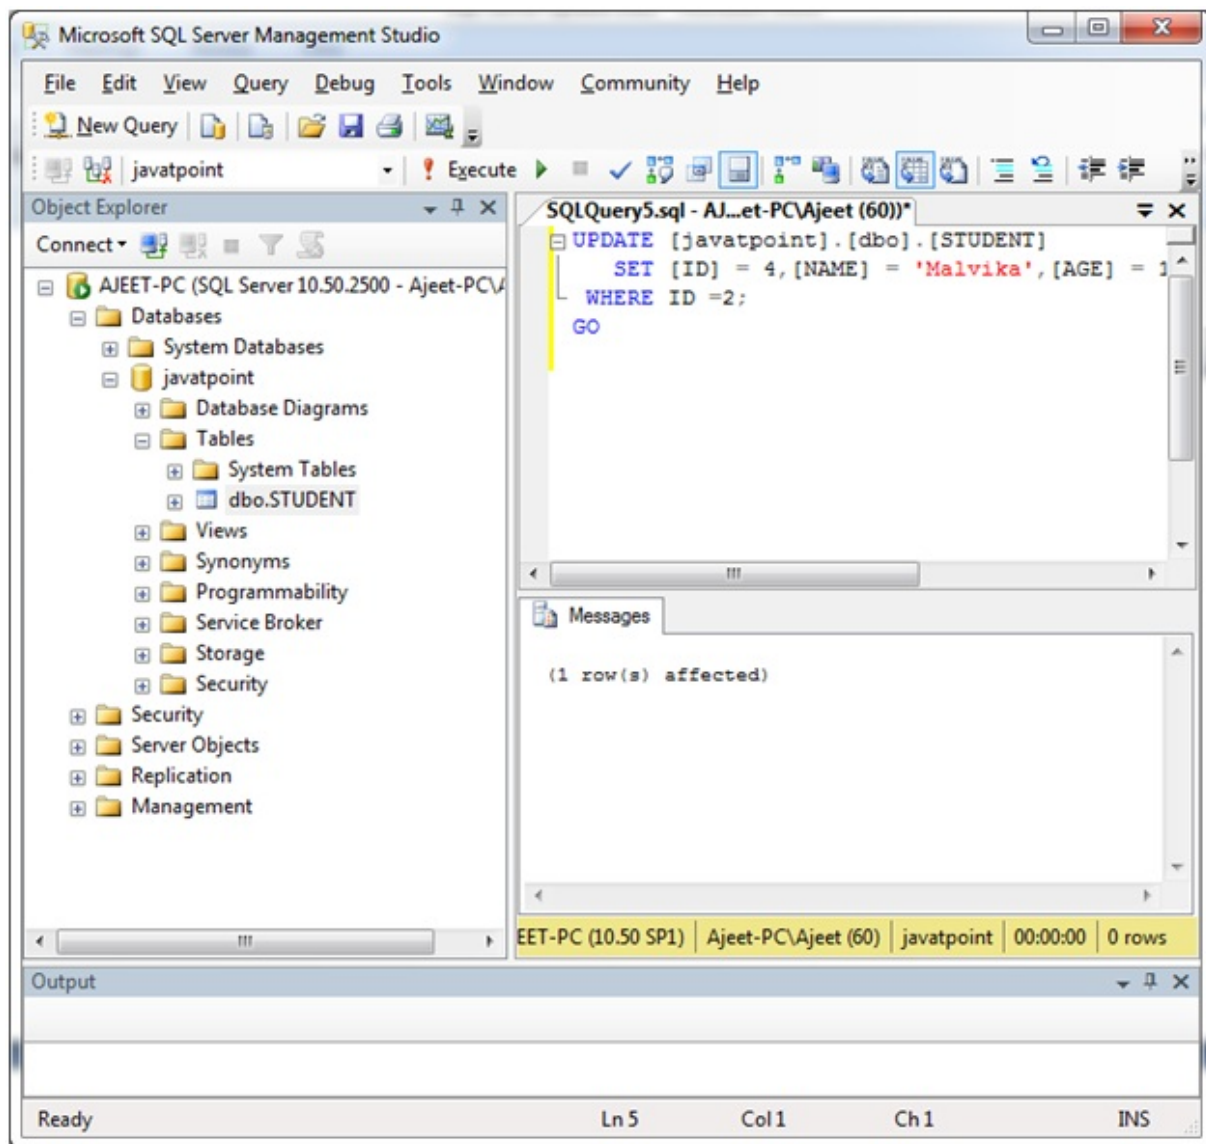

After clicking on "New Query Editor Window", you will see the following query page.

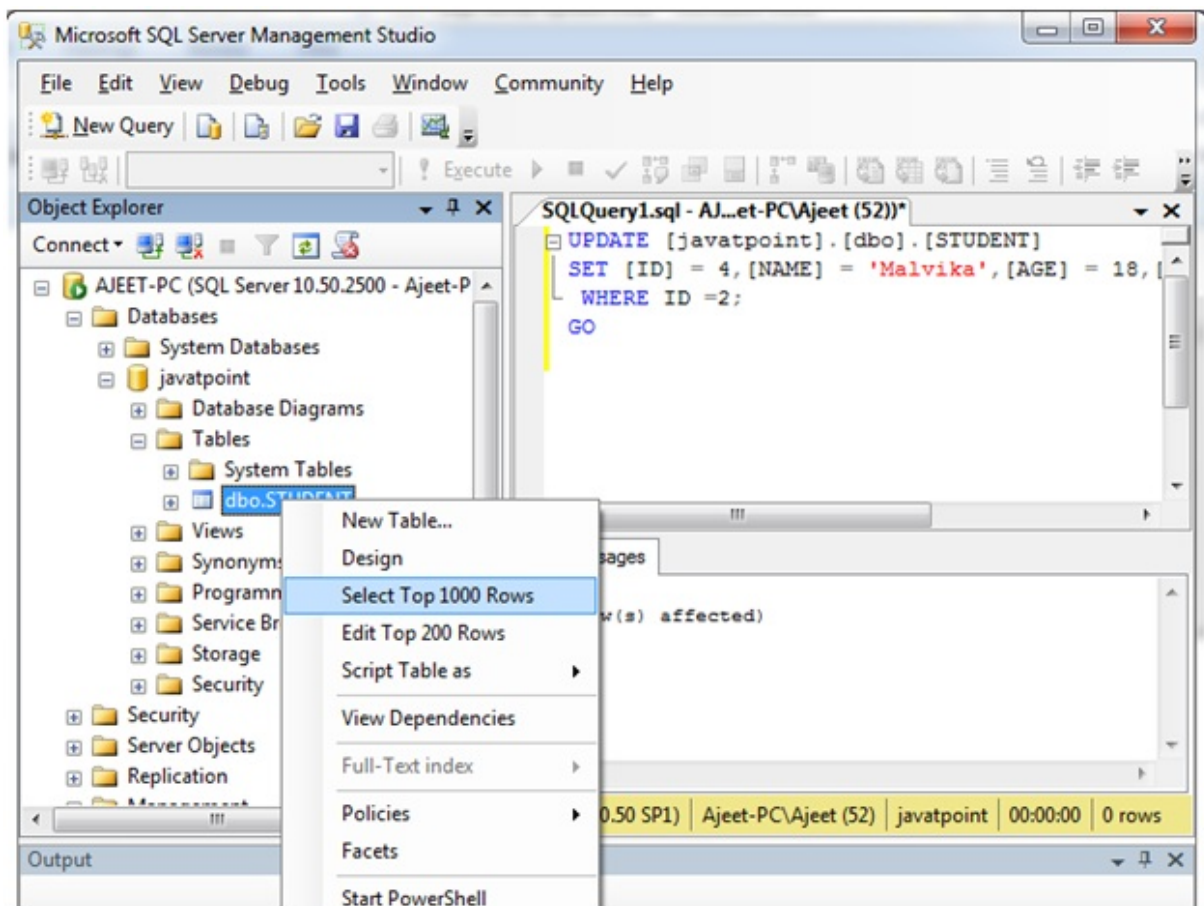

Use the following command:

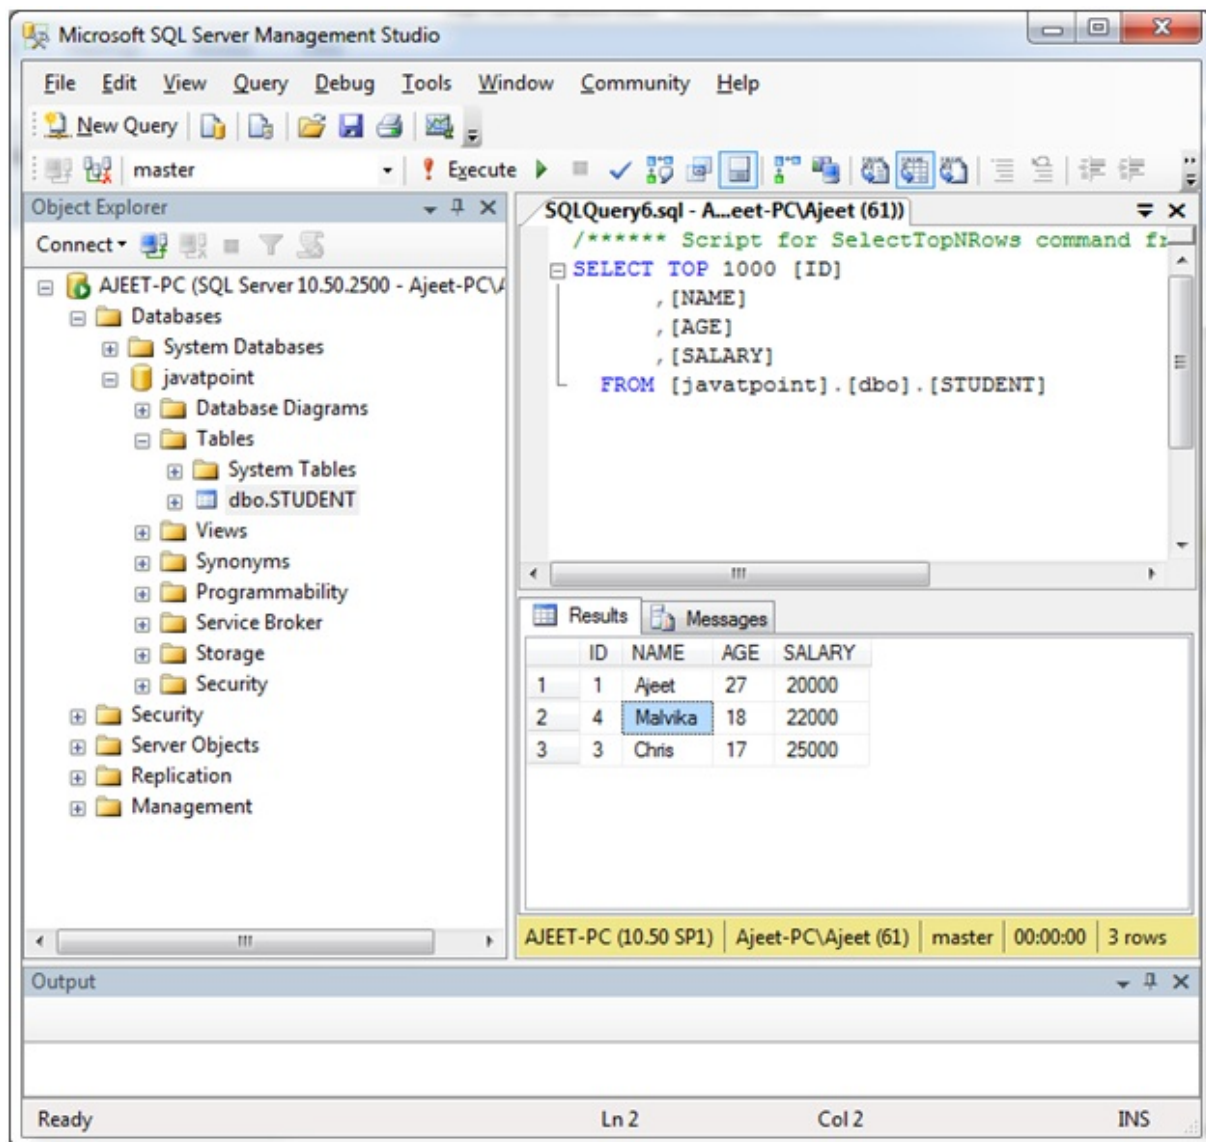

1. UPDATE [javatpoint].[dbo].[STUDENT]
2. SET [ID] = 4,[NAME] = 'Malvika',[AGE] = 18,[SALARY] = 22000
3. WHERE ID =2;
4. GO

You can see that 1 row is affected. You can verify it:

Output:

You can see that the above records are now updated.
