

SQL Server COUNT() Function

javatpoint.com/sql-server-count-function

The SQL Server COUNT() function is used to return the count of an expression.

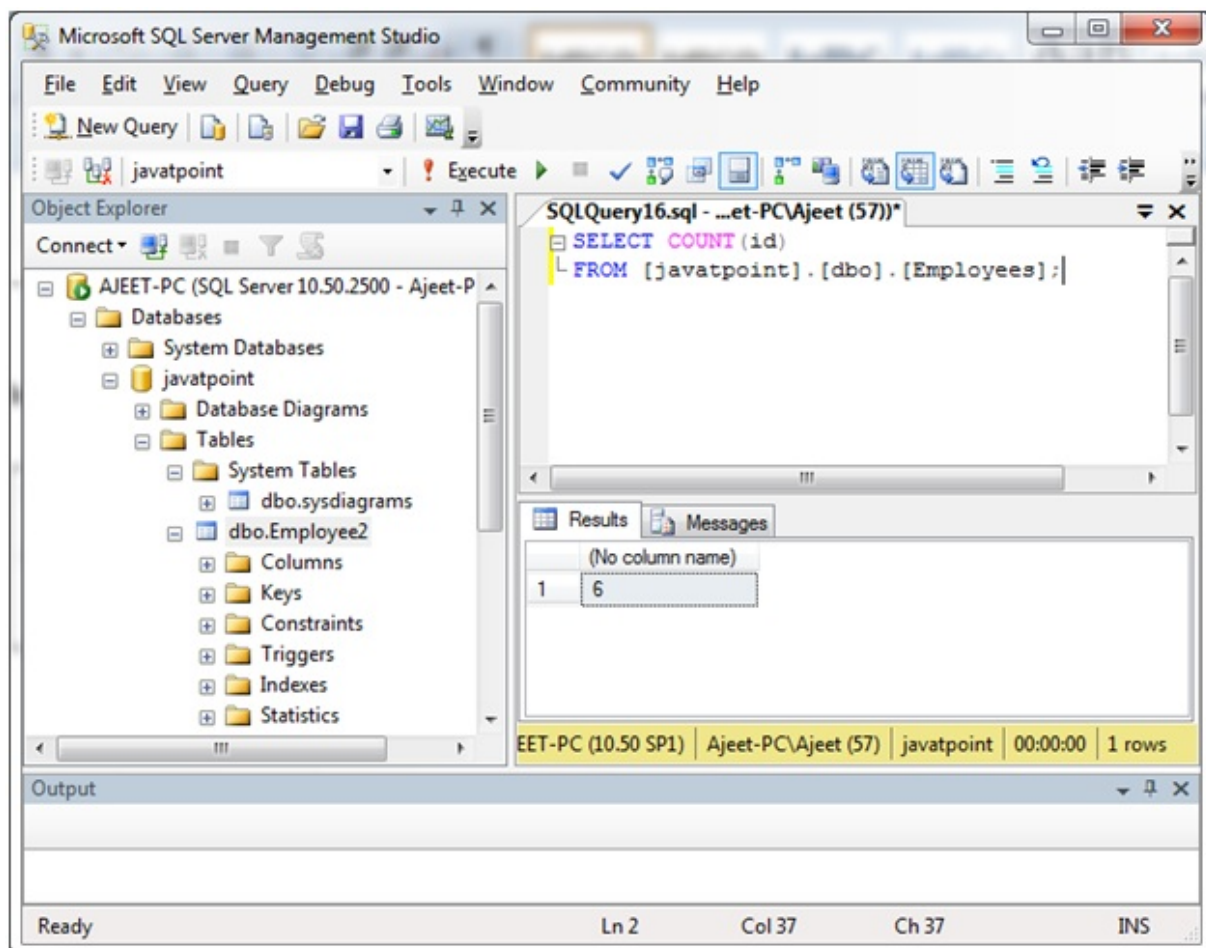

Syntax:

1. SELECT COUNT(aggregate_expression)
2. FROM tables
3. [WHERE conditions];

Example:

1. SELECT COUNT(id)
2. FROM [javatpoint].[dbo].[Employees];

Output:

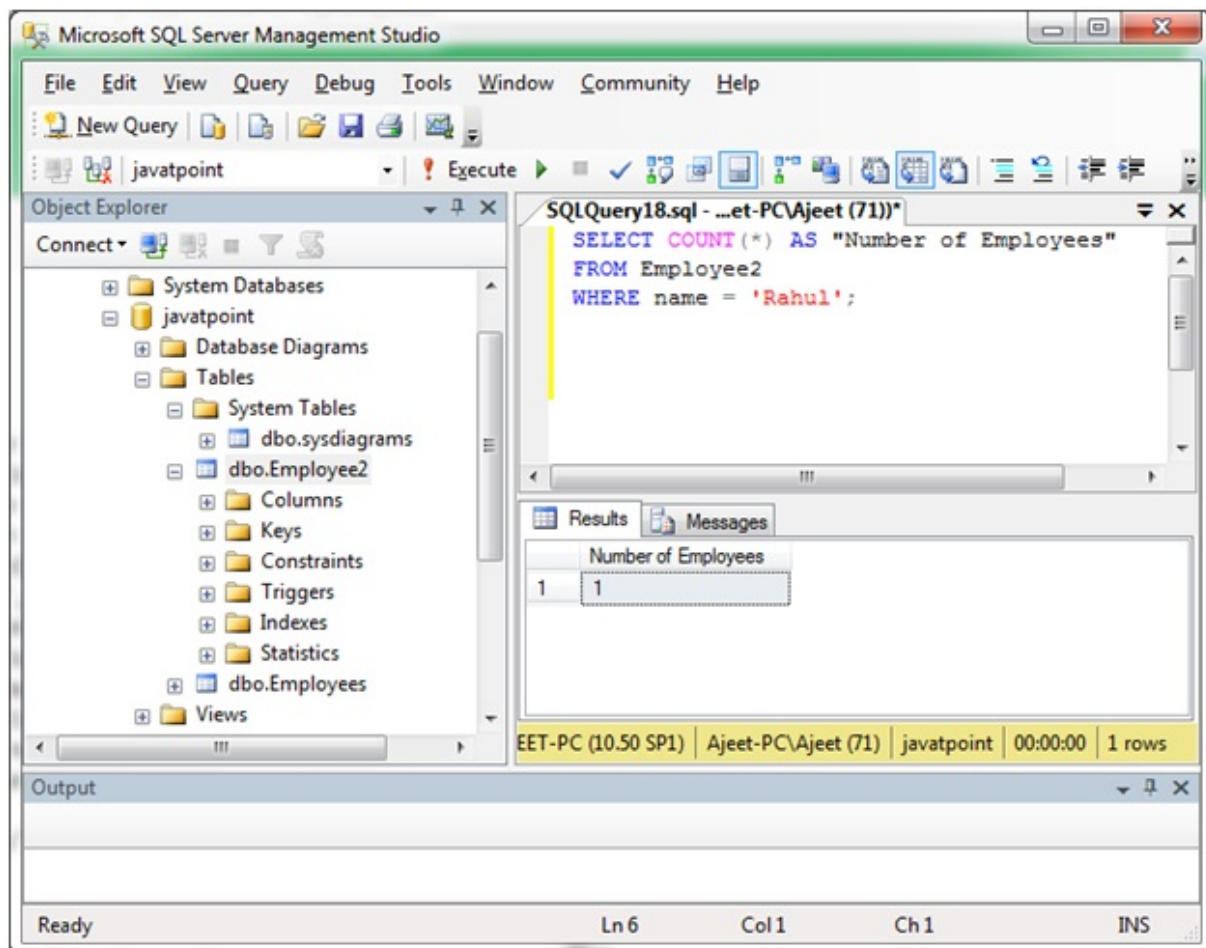

Let's take another table named "Employee2".

Example:

1. SELECT COUNT(*) AS "Number of Employees"
2. FROM Employee2
3. WHERE name = 'Rahul';

Output:

This query is used when you have multiple employees of same name.
